

In the specification:

Please amend paragraph 16 on page 3 as follows:

It will be seen from figure 1 that each main prism 4 ~~had~~ has a peak 8 and a valley 10. It will further be appreciated that each of the transition prisms has a peak 12 that gradually merges into the valley 10. As shown in figure 1, in the usual configuration the peaks 12 of the transition prisms merge into the valleys 10 gradually over the overall height of the reflector.

This means that the curvature of the peaks 12 of the transition prisms differs from the curvature of the peaks 8 of the main prisms. In essence, the peaks 12 are tilted inward toward the valleys 10, which reflect the light incident on those prisms into an area different from that into which the main prisms reflect light.
